1 hssa.cls: HSSA class file, user documentation

This code is in the file `hssa.cls`.

The documentation is created by running `hssa-documentation.dtx`, which calls `hssa.cls` and `hssa.sty`, etc.

Class file for the HSSA journal.¹

1.1 Documentation for authors

If you are writing with \LaTeX please observe the following guidelines:

- Use Unicode encoding for your files (i.e., for \XeLaTeX or \LuaTeX)
- Use the standard features of \LaTeX as documented in the standard manual, *\LaTeX : A Document Preparation System* by Leslie Lamport, or in *The Very Short Guide to Typesetting with \LaTeX* by Peter Flynn and Silmaril Consultants (part of the \TeX live distribution and at [CTAN](#)).
- Use logical markup, not presentational markup. That means you mark things as `\chapter{xxx}`, `\footnote{xxx}`, `\sanskrit{xxx}`, `\title{xxx}`, etc., and not `\textbf{xxx}`, `\vspace{5ex}`.
- Do not use `\newcommand` or `\def` to make private commands. If this appears to be unavoidable, please contact the journal editor before proceeding.
- Provide your bibliography entries in \BibTeX format. The journal uses \BibLaTeX , which is flexible. So please do not use any special formatting commands or non-standard bst files. Just use `\cite{xxx}` etc. in the simplest manner.
- If you have tables, keep them simple and don't spend time putting in many horizontal and vertical lines. They will be reformatted for the journal, in any case.

The above advice is also given on the [HSSA website](#).

¹See <http://tug.org/pracjourn/2005-3/asknelly/> for a nice statement of the difference between `.cls` and `.sty` files.

1.2 Documentation for L^AT_EX hackers converting incoming files to HSSA

1.2.1 Prelims

Start off each HSSA article L^AT_EX file with the following macros:

```
\RequirePackage{snapshot}  
\documentclass{hssa}  
\usepackage{hssa}  
\addbibresource{\jobname.bib}
```

Note that the article's bibliography should have the same name as the article, with the extension .bib.

1.2.2 Metadata

Next, use the following commands to capture the metadata for this article:

```
\HSSAissuenum{999}  
\HSSAissuedate{2999}  
\HSSAarticletitle{A Title}  
\HSSAauthorname{A. N. Author}  
\HSSAauthoraddress{University of University}  
\HSSAfirstpage{000}  
\HSSAlastpage{999}  
\DOI{1.2/3.4.5}
```

These commands generate the right text for the front page, the copyright page and the article's title and running header.

If the running header is too long (author's love long titles), use

```
\HSSAshortarticletitle{An abbreviated title}
```

1.2.3 HSSA user macros

Here follow various commands for use in HSSA articles that aren't part of standard L^AT_EX.

`\CE AD, BC, etc.` There are shortcuts for expressing the eras CE and BCE.
`\BCE` These macros also get the fonts right. There are synonyms: use any of the following and the output will look right:

```
\bce
```

\BC
 \BCE
 %
 \ce
 \CE
 \AD

Don't forget to handle the space after these macros appropriately.

\q Use this to make a loud, obnoxious marginal note in bright yellow box. Use it to annotate the PDF proofs for communicating with the author.

\q{} stands for "query," and is a tailored version of `todonotes`. In addition to the yellow box in the margin, it can also build a page index of the notes that you can print at the end of the article with `\listoftodos`.

`miniedition (env.)` **Environments for ślokas and mini-editions** An environment for making apparatus notes to a single śloka or two.

`sloka (env.)` An environment for typesetting Sanskrit verses; pretty much the same as `verse`.

`\MScite` **Citing manuscripts** Cite your manuscripts using the pattern "City, Library, accession number." The `\MScite` macro will print the right thing in your text, while also writing an entry to an alphabetical index of manuscripts that appears at the end of your article. Saying `\MScite{London, Wellcome, α999}` will print "MS London, Wellcome α 999 in your text.

`\MS` `\MS` is a synonym for `\MScite`

`\MSnocite` If you want to put an entry in your index of manuscripts, but you don't want the entry printed in the main text where you're writing, use `\MSnocite`.

`\MSsilent` A synonym for `\MSnocite`.

`\saneng` **Making a lexical index** If you say `\saneng{pūpa}{cake}` then you'll get "cake (*pūpa*)" printed in your main text. Also, an entry will be written to a lexical page index, both Sanskrit-English and English-Sanskrit.

`\ssaneng` `\ssaneng` is a silent version of the same macro that writes the index entries but puts nothing in the main text.

1.2.4 Language-switching

`\textgreek` See the documentation for [Polyglossia](#) for details of how these are used.

`\textenglish`

`\textsanskrit`

These macros switch to the respective languages and scripts (e.g., Devanagari for `\textsanskrit{}`).

`\dev` `\dev` is just an abbreviation for the `\textsanskrit` macro.

`\cjk` This is just a switch, so say `{\cjk X}` where *X* is a Chinese character.

1.2.5 Citation commands

HSSA uses the Bib_{La}T_EX macros, and the Oxref style for formatting according to the Oxford Hart's Rules guidelines. The NatBib conventions are also loaded, so you can use `\cite`, `\citep` `\citet` in the standard ways, as well as Bib_{La}T_EX's `\footcite`, `\cites`, `\parencites`, etc.

Bibliography and index outputs Say `\printbibliography` at the end of the document.

Here are examples from the end of Speziale's 2019 paper that do more elaborate things.

Index prologue

```
\setlength{\shorthandwidth}{.25\textwidth}
```

```
\indexprologue{\centering\emph{References are to page numbers in this
article.}}
```

Index of manuscripts As indexed using `\MScite` etc.

```
\printindex[manuscripts] % ditto for manuscripts
```

```
\printshorthands % uses features of biblatex-manuscripts-philology
[title=Primary Sources in Manuscripts,
type=manuscript,
% env=details,
%sorting=special,
]
```

Index of editions

```
\printshorthands %
[title=Primary Sources in Printed Editions,
keyword=edition, % flagged as such in the bib file
%prenote=blurb01,
```

```
%sorting=special,
]
```

Index of references

```
\printbibliography
[title=Secondary Sources and Translations,
sorting=nyt,
%keyword=secondary,
notkeyword=edition,
nottype=manuscript,
] % keep the editions in the Text Editions section only
```

`\diatop` **Miscellaneous** Puts more than one accent over a letter. This isn't available in standard L^AT_EX, but we philologists sometimes need it. Say, for example, `\diatop[\'|{\o}]` to get \acute{o} .

`\PreliminaryNote` For that zeroth footnote at the beginning of an article that gives acknowledgments or abbreviations. I prefer to put this material at the end of an article, in a section called "Acknowledgements."

`rotating (env.)` **Rotating pages for big tables and figures** That's pretty much it. You might want to add `\usepackage[figuresright]{rotating}` if you have some tables to go sideways. Then, instead of `\begin{figure}` `\end{figure}`, say `\begin{sidewaysfigure}` and `\end{sidewaysfigure}`. Similarly for `{sidewaystable}`.

`\section` **Standard L^AT_EX sectioning and similar commands** Just use the normal `\section{}` commands, down to `\paragraph`.

`\lettrine` The first line after a section is formatted with an initial drop-cap and small caps, using `\lettrine`. The three arguments are 1. line-drop and over height (always the same), 2. the drop-capital itself, and 3. the remaining letters of the word and some more words up to the end of a phrase. For example

```
\lettrine[lines=2,loversize=.1]{T}{he} object of this contribution is ...
```

How much you include in the phrase is up to you. E.g.,

```
\lettrine[lines=2,loversize=.1]{T}{he object of this contribution} is ...
```

Note that *all* the letters of the phrase should be lowercase. They will be turned into small caps, and uppercase letters won't look right. E.g.,

```
\lettrine[lines=2,loversize=.1]{T}{he mahābhārata and the rāmāyana both feature kṛṣṇa  
%% ...
```

1.2.6 What you get for nothing

In addition to setting up the above commands, the class and style files below will handle the

- colour and layout of the front and back matter,
- the title and section headings,
- the running headers and footers,
- the two-column footnotes
- the use of T_EX Gyre Pagella or other Unicode font in T_EX math mode.

2 hssa.cls: HSSA class file, macro definitions

This code is in the file `hssa.cls`.

See <http://tug.org/pracjourn/2005-3/asknelly/> for a nice statement of the difference between `.cls` and `.sty` files. Here in `hssa.cls`, I'm keeping the code that is part of the core of HSSA's design. I would not expect to change things here much after 2019.

`\NeedsTeXFormat` Declare that we are using the main L^AT_EX2e format.

```
1 \NeedsTeXFormat{LaTeX2e}
```

`\LoadClass` HSSA is based on an 11pt article style:

```
2 \LoadClass[11pt]{article}
```

`\RequirePackage` Here come the packages that HSSA assumes are present.

```
3 \usepackage{hssa-indexing} % has to be loaded before hyperref
4 \RequirePackage{ %
5   graphicx,
6   amsmath,
7   amsfonts,
8   amssymb,
9   textcomp, % arcane LaTeX/NFSS system for subsetting encodings. Needed for
10  % Sigma.
11  metalogox, % for the XeTeX logo etc.
12  wasysym,
13  hyperref,
14  %hyperxmp, % to embed XMP metadata in the PDF;removed because too
15  %%pernickety
16  geometry,
17  array,
18  longtable,
19  polyglossia, % polyglossia calls fontspec
20  multicol,
21  booktabs, % better table spacing, \toprule etc.
22  textcase, % to get \MakeTextLowercase for tweaking the running footer
23  fancyhdr,
24  hssa-biblatex, % bibliography management and formatting
25 }
```

`xcolor` Settings for the `xcolor` package

```
26 \RequirePackage[xetex,
27   dvipdfmx,
28   svgnames,
29   table]
```

```
30 {xcolor}
```

`enumitem` To control the spacing around itemized lists.

```
31 \usepackage{enumitem} % supersedes mdwlist: does it globally
32 \setlist{noitemsep,
33   %labelindent=\parindent,
34   %leftmargin=*,
35 }
```

`\q` Issue notes to the author in the margins of the page proofs. It uses the `todonotes` package.

Define `\q` to be `\empty` for the final run to suppress the display of notes. Put a `\newpage \listoftodos` just before `\end{document}` to help the author with an indexed list to the marginal notes.

```
36 \setlength{\marginparwidth}{2cm} %todonotes manual, section 1.6.5
37 \usepackage[colorinlistoftodos,
38   % disable,
39 %textsize=small,
40 loadshadowlibrary,
41 shadow,
42 backgroundcolor=yellow]{todonotes}
43 \setuptodonotes{fancyline}
44 %
45 \newcommand{\q}[1]{{}\todo{\footnotesize #1}{}}
```

`\PreliminaryNote` A preliminary numberless “footnote” for abbreviations, grant references, and other general initial statements. But commonly, put this in a little “Acknowledgements” section at the end of the paper.

```
46 \newcommand{\PreliminaryNote}[1]{%
47   {\def\thefootnote{\relax }%
48     \footnotetext{\hspace*{-2.3em} %only if not using \hangfootnotes
49       #1}}}
50 %
51 %DW ?
52 \skip\footins=24pt
53 %DW ?
```

2.1 Set the geometry for the pages

`geometry` Set the geometry for the pages DW

```
54 \geometry{twoside,
55   paperwidth=210mm,
56   paperheight=297mm,
```

```

57  textheight=562pt,
58  textwidth=384pt,
59  centering,
60  headheight=30pt,
61  headsep=18pt,
62  footskip= 42pt, %24pt,
63  footnotesep=24pt plus 2pt minus 12pt,
64 }

```

2.2 Front matter

```

\title I thought about doing something like this:
\author \newenvironment{frontmatter}{}{\maketitle}
\date but then gave that up.

\title
65 \title{\LARGE \@HSSAarticletitle }

\author Put the author's address in a parbox because it may have hard linebreaks
(\\) that can cause trouble. This happened in Speziale 2019. I still don't
know why the linebreak is allowed after the authorname but not in the ad-
dress.
66 \author{\@HSSAauthorname\\ [1ex]
67   \parbox{\textwidth}{\small\centering\emph{\@HSSAauthoraddress}}
68 }

\date No date.
69 \date{\relax }

```

2.3 Running headers and footers

```

\HSSAfooter Variable that collects the text for the footer.
70 \def\HSSAfooter#1 %*%
71   {\gdef\@HSSAfooter{#1}}

\@HSSAtitle Define the title for use on the title page.
72 \newcommand{\@HSSAtitle}{History of Science in South Asia}

\HSSAverso Variable that collects the page header of the verso pages.
73 \def\HSSAverso#1{\gdef\@HSSAverso{#1}}

```

`\HSSArecto` Ditto for the recto, and initialize them both to nothing.

```
74 \def\HSSArecto#1{\gdef\@HSSArecto{#1}}
75 \let\@HSSAverso\@empty
76 \let\@HSSArecto\@empty
```

Now the HSSA journal running headers, footers and cover citation. Set the shorttitle to be the same as `\HSSAverso` unless the author redefines it in the document preamble.

```
77 \HSSAverso{\@HSSAarticletitle }
78 \let\HSSAshorttitle\HSSAverso
79 \HSSArecto{\@HSSAauthorname }
```

`\@HSSAheaderfooterfont` Set up the font that will be used for running headers and footers. Small caps, and a bit of extra space, 7%, of the font's point size, between each letter (LetterSpace is from fontspec).

```
80 \def\@HSSAheaderfooterfont{\scshape\addfontfeature{LetterSpace=7}}
```

`\HSSAfooter` Use the `\MakeTextLowercase` macro from the textcase package and construct the running footer for each page.

```
81 \HSSAfooter{\MakeTextLowercase{\@HSSAtitle}\ \@HSSAissuenum\
82      (\@HSSAissuedate) \thefirstpage--\thelastpage}
```

2.4 Fancy headers and footers

Now the fancy header setup, which should be done after the geometry setup.

```
83 %\usepackage{fancyhdr} % after the geometry setup
84 \pagestyle{fancy}
85 \fancyhead{}
86 \fancyhead[CO]{\textenglish{\@HSSAheaderfooterfont\MakeTextLowercase{\@HSSArecto}}}
87 \fancyhead[CE]{\textenglish{\@HSSAheaderfooterfont\MakeTextLowercase{\@HSSAverso}}}
88 \fancyhead[RO]{\textenglish{\@HSSAheaderfooterfont\thepage}}
89 \fancyhead[LE]{\textenglish{\@HSSAheaderfooterfont\thepage}}
90 \fancyfoot[L]{ }
91 \fancyfoot[C]{\textenglish{\@HSSAheaderfooterfont\@HSSAfooter}}
92 \fancyfoot[R]{ }
93 \renewcommand{\headrulewidth}{0pt}
94 \renewcommand{\footrulewidth}{0pt}
```

2.5 Fancy-plus-DOI style

`\fancypage` Make a style for the first page that has the DOI in the bottom right

```

95 \fancypagestyle{fancy-plus-DOI}{%
96   \fancyhead{}
97   \fancyhead[R]{}
98   \fancyfoot[L]{\copy\cclogobox \tiny\textenglish{\@HSSAheaderfooterfont \\\
99     \href{http://doi.org/\@DOI}{doi: \@DOI}}}
100   \fancyfoot[C]{\textenglish{\@HSSAheaderfooterfont\@HSSAfooter}}
101   \fancyfoot[R]{}
102 }

```

2.6 Link colours

`\definecolor` This is the colour that will be used for the URL links; it's dark, so that it doesn't disturb the reading as much as the standard blue would do. It depends on the `xcolor` package.

```

103 \definecolor{darkbrown}{rgb}{0.4, 0.26, 0.13} % from http://latexcolor.com/

```

2.7 Output the preliminary matter

These commands depend on `hyperref`, but that is always loaded so there's no need to check.

```

\AtBeginDocument
104 \AtBeginDocument{%
105   \coverpage
106   \copyrightspage
107   %
108   \setcounter{page}{0}

```

It would have been convenient to `\input{sanskrit-hyphenations}` at this too, but for some reason this doesn't work. These hyphenations have to be

`\input after \begin{document}.`

2.8 Output the final pages that come after the article

```
\AtEndDocument
123 \AtEndDocument{%
124     \newpage

2.9 Arrange the appendix

2.27 Mini edition environment

483 \hangfootnotes
484 % \let\footnote\originalfootnote
485 }
486 {\end{minipage}
487 \end{quote}
488 }
```

Resetting `\footnote` to `\originalfootnote` is no longer needed. Standard non-reledmac L^AT_EX footnotes are now restored by the `\@minipagerestore` hook in the file `hssa-reledmac.sty`.

2.28 Index of Manuscripts

`\MScite` The command `\MScite` is defined in `hssa-indexing.sty` that is loaded earlier in this file.

Usage:

```
\MScite{City Library Accession no.}  
\MScite{London Wellcome Indic alpha 23}  
\printindex[manuscripts]
```

3 hssa.sty: HSSA main style file

This code is in the file `hssa.sty`. Style file for the HSSA journal.² Here in `hssa.sty`, I'm keeping the code that is not part of the core of HSSA's design, including calls to other style files that might or might not be included for different articles.

3.1 Load basic macros for reledmac

`hssa-reledmac (env.)` We load `reledmac.sty` with some parameters set in the file `hssa-reledmac.sty`. This redefines `\footnote` to produce double-column notes. Also, it makes the macros of `reledmac` available for making critical editions.

```
489 \usepackage{hssa-reledmac} % journal home style, two-col footnotes
```

For some documents without the need for critical edition features, it may be enough to use `dblfnote.sty` instead.

Note: we don't load `hssa-biblatex` here because it is already loaded in `hssa.cls`; it's a permanent feature of HSSA.

3.2 Languages and fonts, Polyglossia-style

4 hssa-reledmac.sty: critical edition and footnote column macros

This code is in the file `hssa-reledmac.sty`.

4.1 Two-column footnote formatting

With help from [EDMAC](#) and [Stackexchange](#).

```
537 \usepackage[nocritical,
538     noend,
539     %noeledsec,
540     %noledgroup,
541     series={A, B, C, D, E, F, G, H, I}]{reledmac}
542 \usepackage{setspace}
543 %\let\footnoteruleA=\relax % do we want a footnoterule?
544 \def\thempfootnote{{\itshape\@alph\c@mpfootnote}} % from latex.ltx
545 \arrangementX[A]{twocol}
546 \arrangementX[B]{twocol} % for occasional use in the \verb|miniedition| environment
547 \colalignX{\relax } % looks better. But should we optimize narrow columns
548 %by going \verb"\raggedright"?
549 \beforenotesX{2em plus 1.5em minus 1.5em} % spacing above notes
550 \renewcommand*{\normalfootfootmarkX}[1]{%
551     \@nameuse{@thefnmark#1}\hspace*{.5em}}
```

`\footnote` `\footnote` is not going to be the standard L^AT_EX footnote. So store the standard version. Then restore the standard `\footnote` when inside minipage environment.

Finally, make the command `\footnote` into the `reledmac` two-column command.

```
552 \let\originalfootnote=\footnote % store this for use in minipages
553 \def\@minipagerestore{\let\footnote\originalfootnote} % restore standard \footnote
554 % Now change \verb"\footnote" to the reledmac version:
555 \let\footnote=\footnoteA
```

[Stackexchange help](#). Commented out, but useful in some tight situations:

5.2 Load Biblatex

Here are the macros for our bibliographies. HSSA uses *New Hart's Rules* (Oxford University Press, 2014) as its formatting style guide. These Rules are comprehensively implemented for Bib \LaTeX through the `oxref` and `oxyear` packages. See also section 5.3 below.

```
561 \usepackage[%  
562 backend=biber,  
563 %bibstyle=multiple-dm, % for biblatex-manuscripts-philology  
564 % oxref:  
565 style=oxyear,  
566 dashed=true,  
567 usetranslator=true,% see oxref documentation para 2.1.10  
568 %ibidtracker=constrict,  
569 %ibidpage=false,  
570 %pagetracker=page,  
571 %idemtracker=constrict,  
572 sorting=ynt,
```

(on `ynt`, see [Cikitsā blog post](#).)

```
573 sortcites=true,  
574 backref=false,  
575 date=comp,  
576 datecirca=true,  
577 dateuncertain=true,  
578 bibencoding=auto,  
579 hyperref=auto,  
580 isbn=true,  
581 doi=true,
```

```

582 language=auto,
583 natbib=true,
584 texencoding=auto,
585 url=true,
586 urldate=short,
587 useprefix=true,
588 %refsection=section,
589 giveninits=false,
590 maxbibnames=10]{biblatex}

```

5.2.1 Make the font of all bibliographies small

```

\bibfont
591 \renewcommand*{\bibfont}{\small}
592 %%smaller font

```

5.3 Settings for oyear

```

593 \ExecuteBibliographyOptions[% for biblatex-oyear
594 book,
595 mvbook,
596 mvcollection,
597 inbook,
598 incollection,
599 inreference,
600 collection,
601 reference,
602 mvreference]{useeditor=true,usetranslator=true}
603 \AtBeginDocument{\assignrefcontextentries[]{*}}

```

See [Cikitsā blog post](#) for further explanation of the above.

5.4 Bibliography punctuation

Following sections 3.10 and 4.7.5 of the Bib_{La}T_EX manual, put the comma *inside* the quotation marks of the title.

```

604 \DefineBibliographyExtras{british}{\DeclareQuotePunctuation{.,}}

```

5.5 Bibliography sorting

To avoid saying `\newrefcontext[sorting=nyt]` before `\printbibliography` in every document redefine `\printbibliography` (from `biblatex.sty`):

```

\printbibliography

```

```

605 \renewrobustcmd*{\printbibliography}{%
606     \newrefcontext[sorting=nyt] % added this line
607     \begingroup
608     \delimcontext{bib}%
609     \edef\on@line{\on@line}%
610     \@ifnextchar[%]
611     {\blx@printbibliography}
612     {\blx@printbibliography[]}%
613 }

```

5.6 Positioning of the notes

To make bibtex notes print last, like addendums from [Stackexchange](#).

```

614 \DeclareSourcemap{
615     \maps[datatype=bibtex]{
616         \map{
617             \step[fieldsource=note, final]
618             \step[fieldset=addendum, origfieldval, final]
619             \step[fieldset=note, null]
620         }
621     }
622 }

```

5.7 csquotes

`csquotes` The american option with `csquotes` gives double quotes in article titles in the bibliography.

```

623 \usepackage[style=american]{csquotes}

```

5.8 Tweak the citation style

Remove the “p.” and “pp.” from, for example, `\volcite` :

```

624 \DefineBibliographyStrings{english}{%
625     page          = {},
626     pages         = {},
627     volume = {vol},
628     volumes = {vols},
629 }

```

5.9 Unused code

Biblatex documentation 4.11. and macros from `biblatex.def` Enable hot URLs for PDFs at [Archive.org](#) and [Academia.edu](#) etc.

Make URLs smaller:

```
630 %\DeclareFieldFormat{url}{\textsc{url:} {\small \href{#1}{\nolinkurl{#1}}}}
631 %\DeclareFieldFormat{doi}{\textsc{doi:} {\small \href{#1}{\nolinkurl{#1}}}}

5.12 “Forthcoming” hacks

Biblatex hacks to get pubstate (“forthcoming” etc.) behaving as it should
Biblatex manual 4.5.10

```

671 \DeclareLabeldate{%
672   \field{date}
673   \field{year}
674   \field{pubstate}
675   \field{eventdate}

682   \thefield{urlday}\addspace%
683   \mkbibmonth{\thefield{urlmonth}}\addspace%
684   \thefield{urlyear})\isdot}

```

5.14 Hyperlink magic

Some magic from “moewe” at [Stackexchange](#) that makes hyperlinks work from citations to a list of abbreviations.

```

685 \DeclareFieldFormat{shorthandwidth}{%

```

```

686 \bibhypertarget{shorthand:\thefield{entrykey}}
687 {#1}}
688
689 \DeclareFieldFormat{bibhyperref}{%
690 \iffieldundef{shorthand}
691 {\bibhyperref{#1}}
692 {\bibhyperlink{shorthand:\thefield{entrykey}}{#1}}}

```

5.15 More hyperlink magic

Normally, Bib^{La}T_EX's `\citeyear` and `\citeauthor` do not have hyperlinks, even if everything else does. Here's code from [Stackexchange](https://stackoverflow.com/questions/11111111/biblatex-hyperlinks) to add those hyperlinks:

```

693 \DeclareCiteCommand{\citeauthor}
694 {\boolfalse{citetracker}%
695 \boolfalse{pagetracker}%
696 \usebibmacro{prenote}}
697 {\ifciteindex
698 {\indexnames{labelname}}
699 {}%
700 \printtext[bibhyperref]{\printnames{labelname}}}
701 {\multicitedelim}
702 {\usebibmacro{postnote}}
703 %
704 \DeclareCiteCommand{\citeyear}
705 {\usebibmacro{prenote}}
706 {\bibhyperref{\printfield{year}}\bibhyperref{\printfield{extrayear}}}
707 {\multicitedelim}
708 {\usebibmacro{cite:postnote}}
709 %

```

5.16 Patch so that date-abbreviations aren't just one digit

6 hssa-indexing.sty: indexing for HSSA

This code is in the file hssa-indexing.sty.

Formerly used xindy; now updated to use xindex

Now (2023) see the package `indextools` by Maïeule Rouquette (<https://github.com/maieul/indextools>) that patches `imakeidx` to work with `bidu`.

```
730 %\usepackage[imakeidx]{xindex} % deprecated by indextools
731 \usepackage[xindex]{indextools}
732 % \PassOptionsToPackage{nonewpage}{imakeidx}
733 %
734 \indexsetup{level=\section*,
735   noclearpage,
736   firstpagestyle=fancy
737 }
738 %
739 \makeindex[name=lexical,
740 title=Lexical Index,
741 columns=3,
742 options= --config iast --no_casesensitive --noheadings, % nocasesensitive,
743 %noheadings
744 ]
745 %
746 \makeindex[name=manuscripts,
747 title=Index of Manuscripts,
748 options= --config iast --no_casesensitive --noheadings,
749 columns=1]
750 %
```

Before the `\printindex` command say
“\indexprologue{References are to page numbers.}”

6.1 English-Sanskrit indexes

Command for English words to be followed by Sanskrit in parentheses, and both to be sent to the lexical index.

```
\saneng
751 \newcommand{\saneng}[2]
752 % #1 = Sanskrit
753 % #2 = English
754 {#2 (\sansk{#1})%
755   \index[lexical]{#2!#1@\emph{#1}}%
756   \index[lexical]{#1@\emph{#1}!#2}}
```

`\ssaneng` A “silent” version of `\saneng` that sends items to the index but prints nothing in the main text.

```
757 \providecommand{\ssaneng}[2]% silent index entry
758 % #1 = Sanskrit
759 % #2 = English
760 {\index[lexical]{#2!#1@\emph{#1}}}%
761   \index[lexical]{#1@\emph{#1}!#2}}
```

Tidy up the index spacing:

```
762 \renewcommand\@idxitem{\par\hangindent 15\p@ }% from sanmed.sty
```

6.2 Commands for citing and indexing manuscripts

`\MS` To cite manuscripts in canonical form, use the following structure
`\MScite <City> <Library> <Shelf number>`.
E.g.,

```
\MS{London Wellcome  $\beta$  33}
```

(`\MS` is shorthand for `\MScite`.) This prints “MS London Wellcome β 33” in the text and also sends entries to your index of manuscripts, that will be printed at the end of your article with `\printindex[manuscripts]`.

```
763 \newcommand{\MScite}[1]{MS #1\index[manuscripts]{#1}}
764   \let\MS=\MScite
```

`\MSnocite` And a silent version. This sends an entry to the index but prints nothing in the main text (works like `\nocite`):

```
765 \newcommand{\MSnocite}[1]{\index[manuscripts]{#1}}
766   \let\MSsilent=\MSnocite
```

Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
